

Camscaff provided MACM with an excellent Design, Supply , Erection and Dismantling Service for all its Scaffolding requirements on the project at Minerva Street, Glasgow.

The seven storey over basement building , built on a curve on a busy city centre location, presented numerous challenges due to the site restrictions, the numbers of sub contractors each with their own specific needs, all of which were dealt with efficiently by Camscaff.

Throughout the contract Camscaff worked on a daily basis with site management and ensured that there was no lost time arising from the provision of safe and secure working platforms all in accordance with Health and Safety legislation, to a very tight and short build programme.

MACM has no hesitation in providing its highest recommendation for the service provided by Camscaff's competent, efficient and economical service .
